Summary

I am a product-oriented engineer. Took responsibility of release process, architectural decisions. Worked solo and in a team. Love discussions with products, designers, other roles and teams. Wanted to become a designer at first. Participated in hiring of iOS engineers in every company.

I write tests. Worked with UI and isolated tests. Have experience in different iOS architectures, optimizations, accessibility, native feel. My main tech stack is Swift, UIKit, SwiftUI.

Published 2 talks on SwiftUI and Functional Architecture in Swift. Own a channel on Telegram.

Senior iOS Engineer at Aviasales

Feb 2022 — Now

International company with B2C and B2B products.

I started in a product-oriented feature team. We were focused on the media content part of an app. Rewrote untestable parts in crucial map-related screens. Made it testable and ready for change.

Moved to platform team in 2023. Improved testing infrastructure and design system. Improved daily DX and testability of crucial parts. Converted application to Swift Concurrency and Swift 6. Rewrote architecture layer to TCA with state-based navigation. Living on the edge of development with AI.

Senior iOS Engineer at Kontur

Jul 2019 — Feb 2022

B2B-oriented company.

Worked with projects on Swift. New and on support. Was responsible for 3+ out of 10 company apps. Supported CI/CD flows. Used scripts on Bash, Ruby, and Swift. Wrote a web React dashboard with analytics data. Wrote one full app from scratch on Redux UDF architecture. Fixed app-wide navigation problems with FlowControllers. Wrote tests. Worked with video player.

iOS start in Yekaterinburg companies

2015 — 2019

Started in iOS on Treehouse courses.

Alone in a product startup, then moved to outsource company with iOS team. Growed there working in a feature team.

After that moved to international b2c product. Worked on News app and tvOS video app. Wrote video player, photo editor, onboarding on Core Animation. Performed optimizations on lists and photo camera.
